

Minutes non-posted meeting :

Art, Brian, Steve, John, Dave White and three architect members

1st steps:

Measure out physical layout and then conceptual issues. General assessment of the current building and review.

The committee believes a refurb on the building may not be possible and lean toward a new building purpose built. Needs and not wants is clearly established. Look at Cummington and Highland Ambulance buildings as benchmarks examples.

Discussion of pole barn at the highway garage to replace salt shed. Septic, wells and bathrooms.

John MacMillian:

Go through the building, prepare deficiency list, repair costs. Accessibility, sprinklers in the building.

Present Option A of refurb

Present Option B of a new, efficient building. Develop a design for a new building to prep for town meeting. Building code review to spec.

Needs for space allotment for discussion with the depts.. Define high of wants and limit down

Survey topo, geo. tech borings, hazmat and survey. Will solicit proposals based on the scope of work and then review budgeted numbers.

Starting report needs to be in by January 2018. Therefore, survey and borings should be first. Art, defines the area of the salt shed area will be demoed. A civil engineer will define setbacks and footprint on the building. Survey.

Many options were discussed but the main theme was fitting a building on the site and overall cost.

John:

Need to discuss what to do with fire trucks during demo. Define a time of year to ground break. Design June/July with spring 2019 start.

Discussion:

Who to give input? Small functioning committee. 16th Wednesday 1800hrs

Adjourned 745pm
